European Research Council (ERC): ERC Template

Summary

Project Acronym

Project Number

Provide a dataset summary

Guidance:

This should include a dataset reference and name; origin and expected size of the data generated/collected; data types and formats.

Several datasets may be included into a single DMP

FAIR data and resources

1. Making data findable

Guidance:

dataset description: metadata, persistent and unique identifiers e.g., DOI

2. Making data openly accessible

Guidance:

which data will be made openly available and if some datasets remain closed, the reasons for not giving access; where the data and associated metadata, documentation and code are deposited (repository?); how the data can be accessed (are relevant software tools/methods provided?

3. Making data interoperable

Guidance:

which standard or field-specific data and metadata vocabularies and methods will be used

4. Increase data reuse

Guidance:

what data will remain re-usable and for how long, is embargo foreseen; how the data is licensed; data quality assurance procedures

5. Allocation of resources and data security

Guidance:

estimated costs for making the project data open access and potential value of long-term data preservation; procedures for data backup and recovery; transfer of sensitive data and secure storage in repositories for long term preservation and curation
